DATA - INTRODUCTION

WHO AM I

- Rémy Cazabet (remy.cazabet@univ-lyon1.fr)
- Class page: http://cazabetremy.fr/Teaching/TIW/DAD.html
- Associate professor, LIRIS Laboratory, Lyon 1 University
- Team: Data Mining and Machine Learning (DM2L)
- Lyon's Institute of Complex Systems (IXXI)

WHO AM I

- Research topics:
  - Large Network Analysis (Cryptocurrencies…)
  - Graph Clustering
  - Dynamic network
  - Graph Embedding
  - Graph Neural Networks

- Interns application welcomed

CLASS OVERVIEW

- Class divided in 2 independent parts:
  - Monday: me, Data analysis, manipulation, visualization
  - Wednesday: Fabien De Marchi (frequent patterns and others)

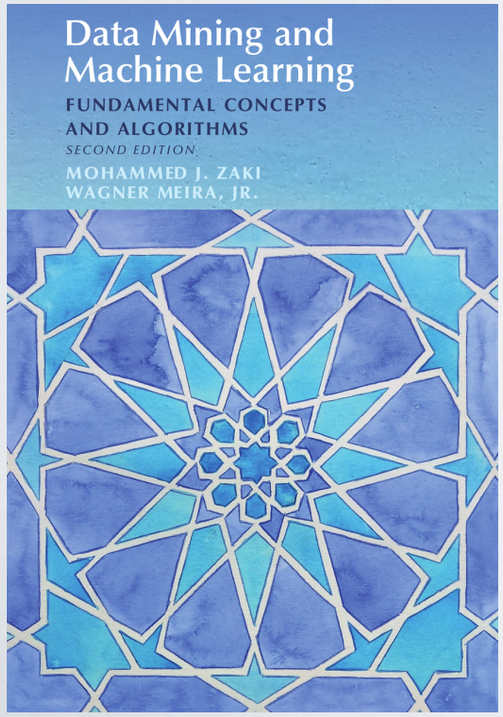
- My part: how to interpret real data. How to make sense of it.

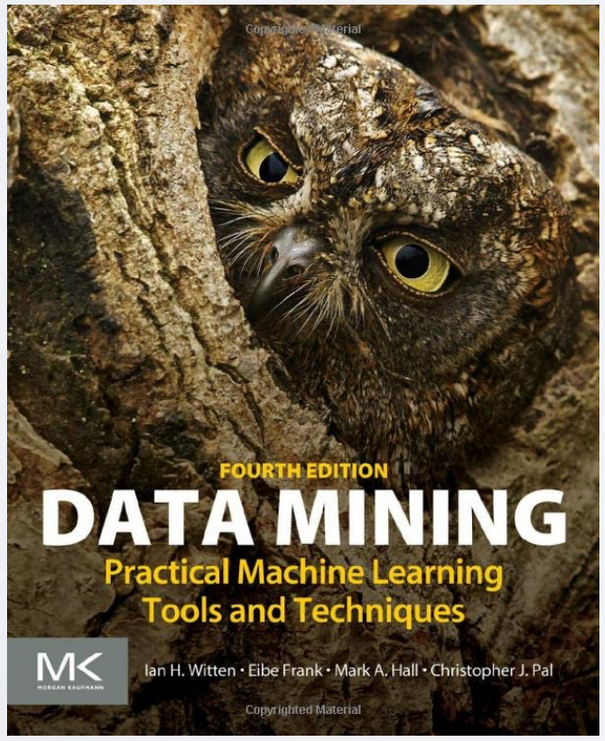
CLASS OVERVIEW

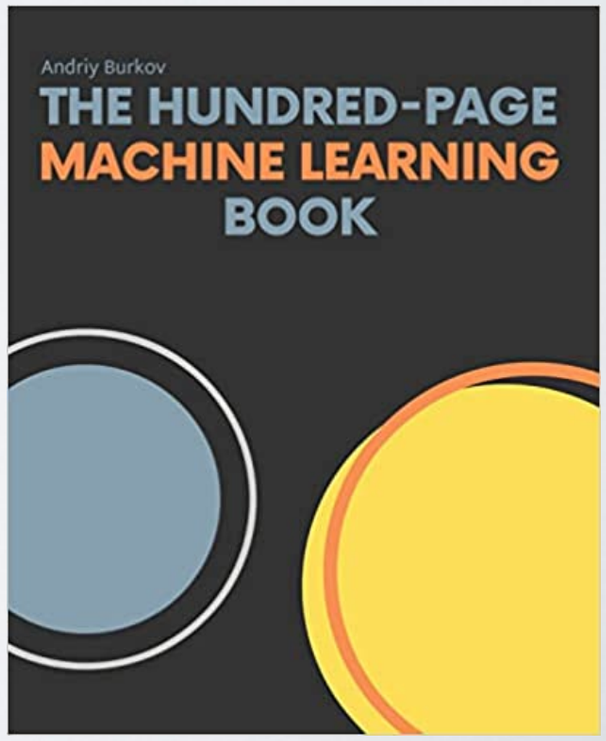
- Data description, preparation, etc.
- Unsupervised ML (beyond k-means)
- Supervised ML (beyond linear regression)
- Spatial/Temporal Data
- Network Data
- Dash: data analysis webapp
- Project => Data Analysis WebApp

THIS CLASS

- This class is based on:
  - Countless Wikipedia and blogs (use them too!)
- Some books
  - Borrow at my office







TYPES OF DATA

DATA TYPES

- Data types : What kind of data (feature, variables) can we encounter?
  - People
    - Name, Age, Gender, Revenue, Birth Date, Address, etc.
  - House/Apartment
    - Surface area, Floor, Address, # of rooms, # of Windows, Elevator, etc.

- Types of features?

DATA TYPES

- Nominal
  - From "names". No order between possible values
  - Color, Gender, Animal, Brand, etc. (Numbers:Participant ID, class…)
- Ordinal
  - Order between values, but not numeric
  - Size[small, medium, large], [Satisfied, …, Unsatisfied], Income [0-10k],[10k-15k], [15k-50k]…
- Interval
- Ratio

INTERVAL

- Numeric values, Difference is meaningful
  - T°: 30°-20° = 15°-5°, But 30° ≠ 2*15°
  - 2022-2020=1789-1787, but 1011 ≠ 2022/2
  - =>0 is not a meaningful value, is arbitrary

RATIO

- Numerical values, all operations are valid
  - Height, Duration, Revenue…

OTHER TYPES

- Real Data can have many other forms
  - Textual
  - Relational (networks)
  - Complex objects (picture, video, software…)

TRICKY CASES

- Real life is complex
- You will have to do modeling choices (feature engineering…)
- Possibles values: Blue, Cyan, White, Yellow, Orange, Red.
  - Nominal or Ordinal ?
- Survey: "rate X on a scale from 0 to 5"
  - What if labels are associated ? ("Bad", "average", …)

TRAPS

- Latitude and Longitude
- Hours expressed between 0 and 12/24, day of month, etc.
  - Convert in time since beginning of dataset ?
- => Space and Time often handled with specific ML methods

MISSING VALUES

- Real life datasets are full of missing values
  - Impossible data: hair color for a bald person
  - More generally, failed to obtain them

- Few ML methods can deal with missing values
  - =>Imputation
    - Naive: fill with average value
    - Use ML to fill missing values (other problems, introduce biases…)
    - Large literature, no good solution

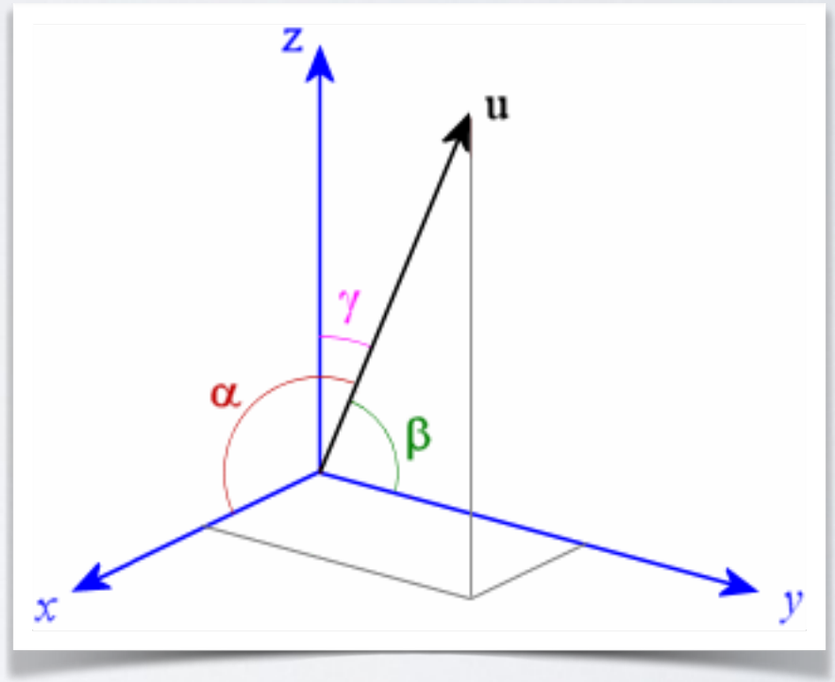
DATA QUALITY

- Data coming from the real world is often incorrect
  - Malfunctioning sensors (T°, speed…)
  - Human error or falsification (e.g., entered 100 instead of 1.00)
  - Undocumented change (e.g., Bicycle sharing station was moved…)
- If the data is plausible, no simple solutions
- Two common problems can be detected
  - Out-of-range values (e.g., a person's weight is negative or above 1000kg…)
  - Zeros. (Weight of the person is 0. But in many cases, zero is possible too…)
    - Variant: 01/01/1970…

UNIVARIATE / MULTIVARIATE

- Single *feature*: univariate
  - Age

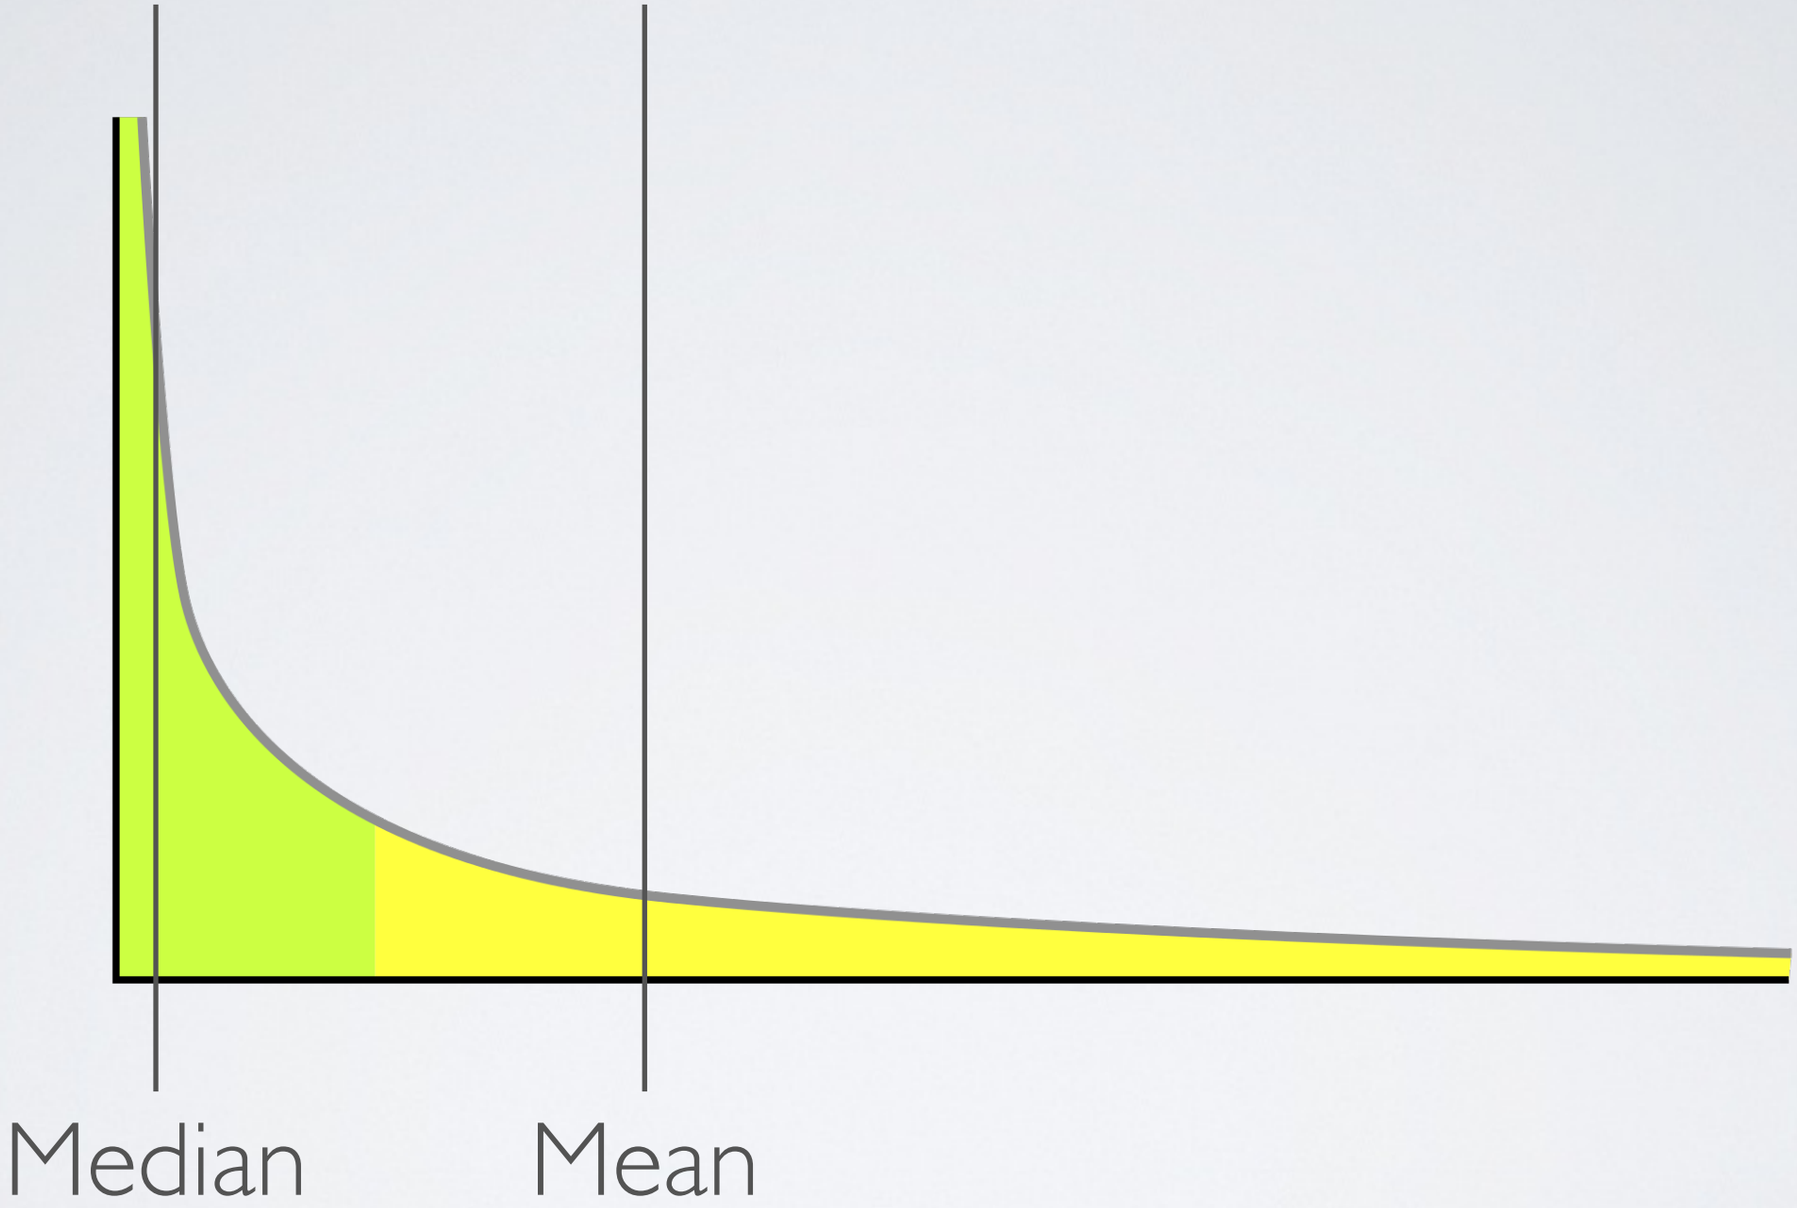
- Real life: multivariate.
  - 2D (age, weight)
  - 3D (age, weight, height)
  - 4D (age, weight, height, genre)
  - …



DESCRIBING A VARIABLE

DESCRIBING VALUES

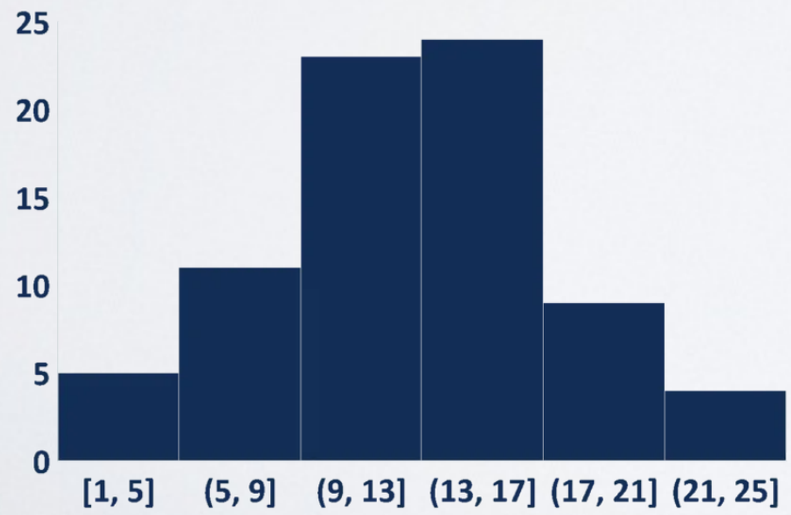
- Mean / Average
  - Be careful, not necessarily representative !
- Median
  - Be careful, not necessarily representative !
- Mode
  - Not necessarily representative
- Min/Max
  - …

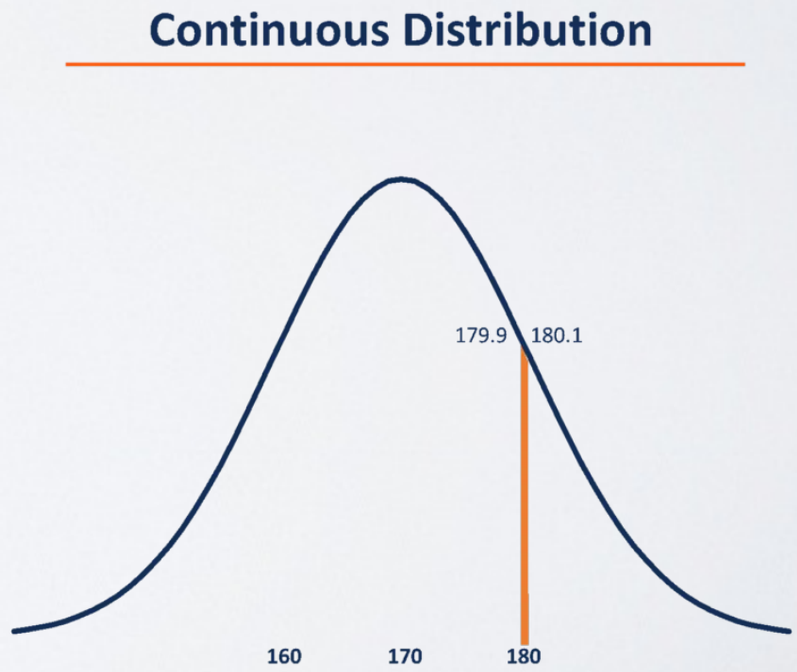


Median
Mean

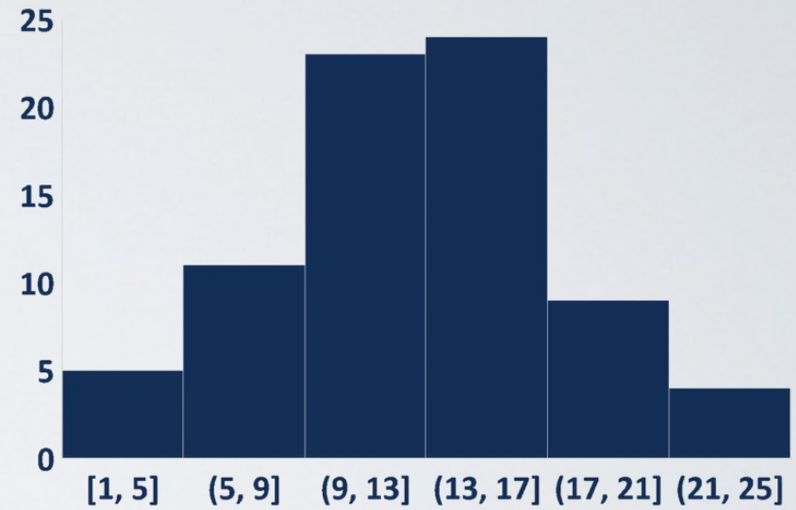
DISTRIBUTION

- What is a distribution?
  - A description of the frequency of occurence of items
  - A generative function describing the probability to observe any of the possible events
  - Discrete or continuous





DISTRIBUTION (DISCRETE)

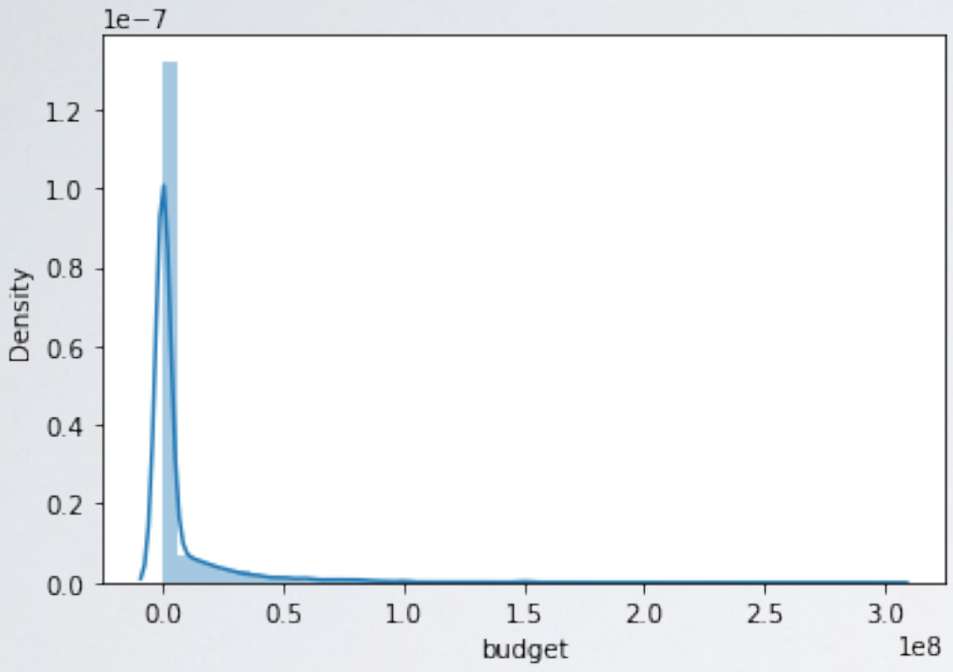


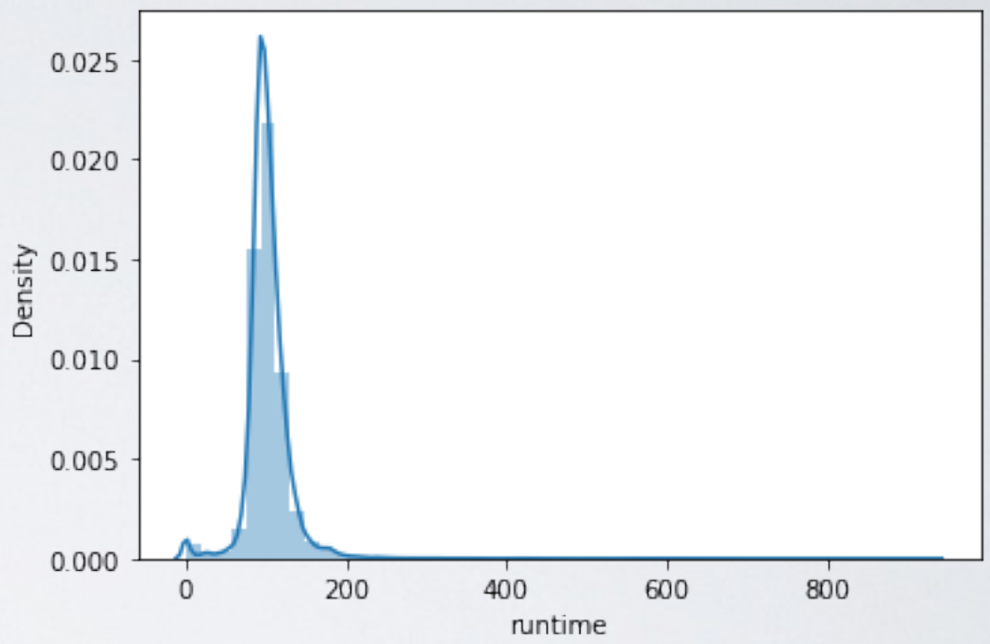
- =>25 observations in the interval (13,17]

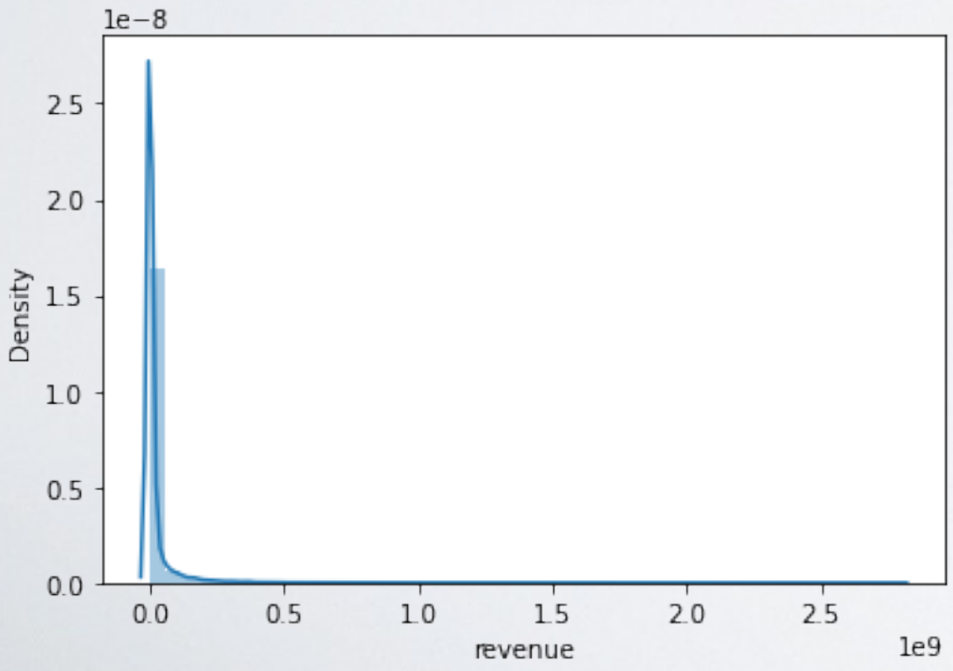
- Raw values for a sample,

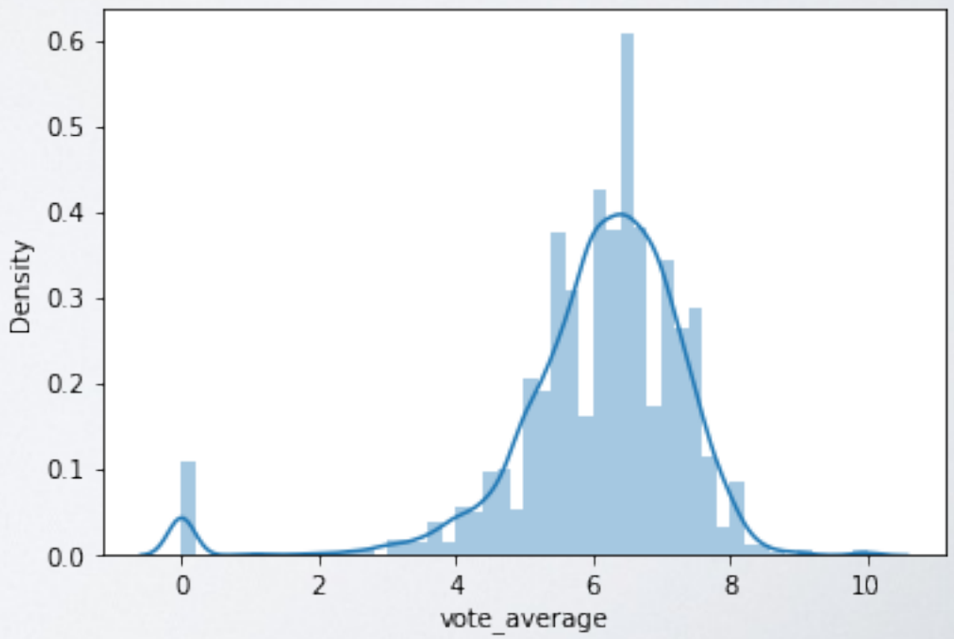
- or fraction
  - 0.25
  - 25%
  - =>Sum to 1. Must be inferior to 1 for any value

EMPIRICAL DISTRIBUTIONS



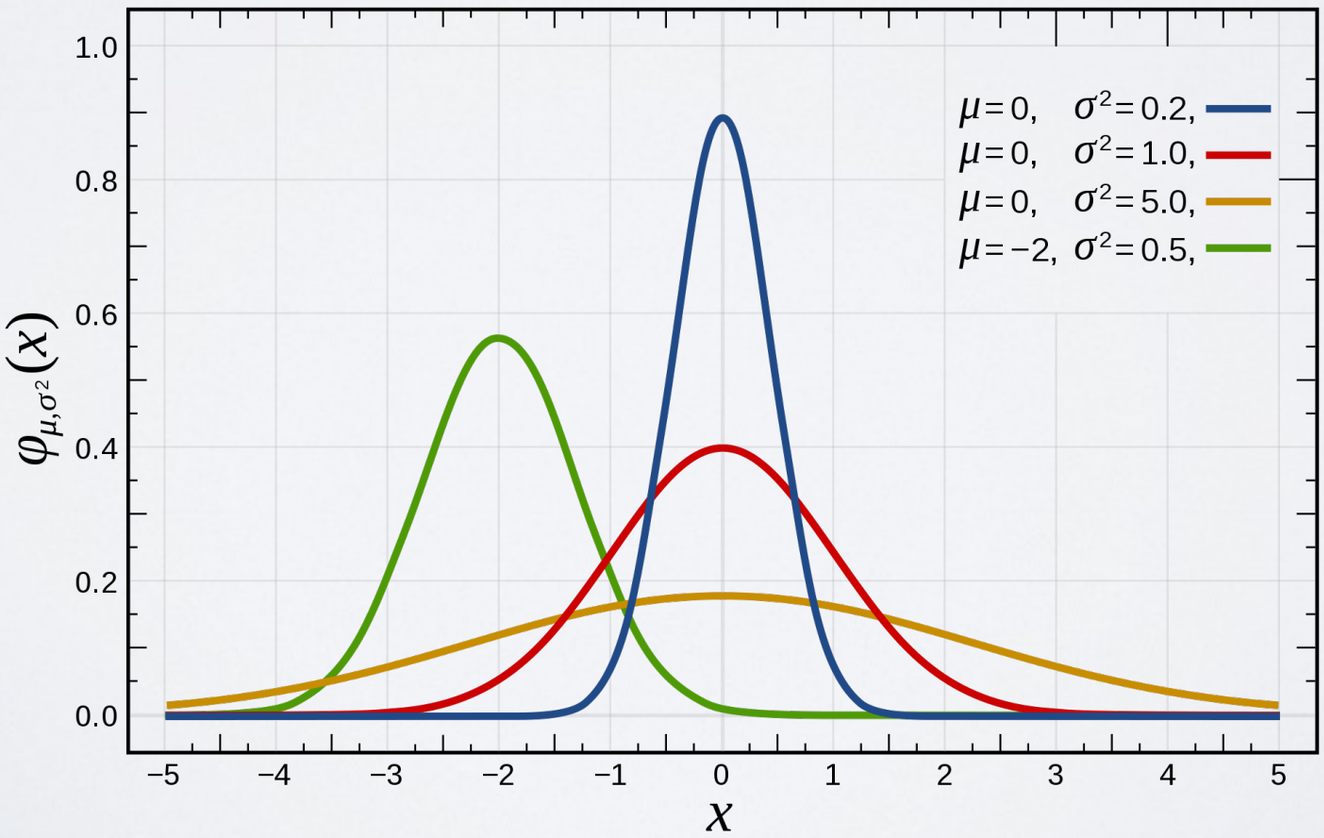






THEORETICAL DISTRIBUTIONS

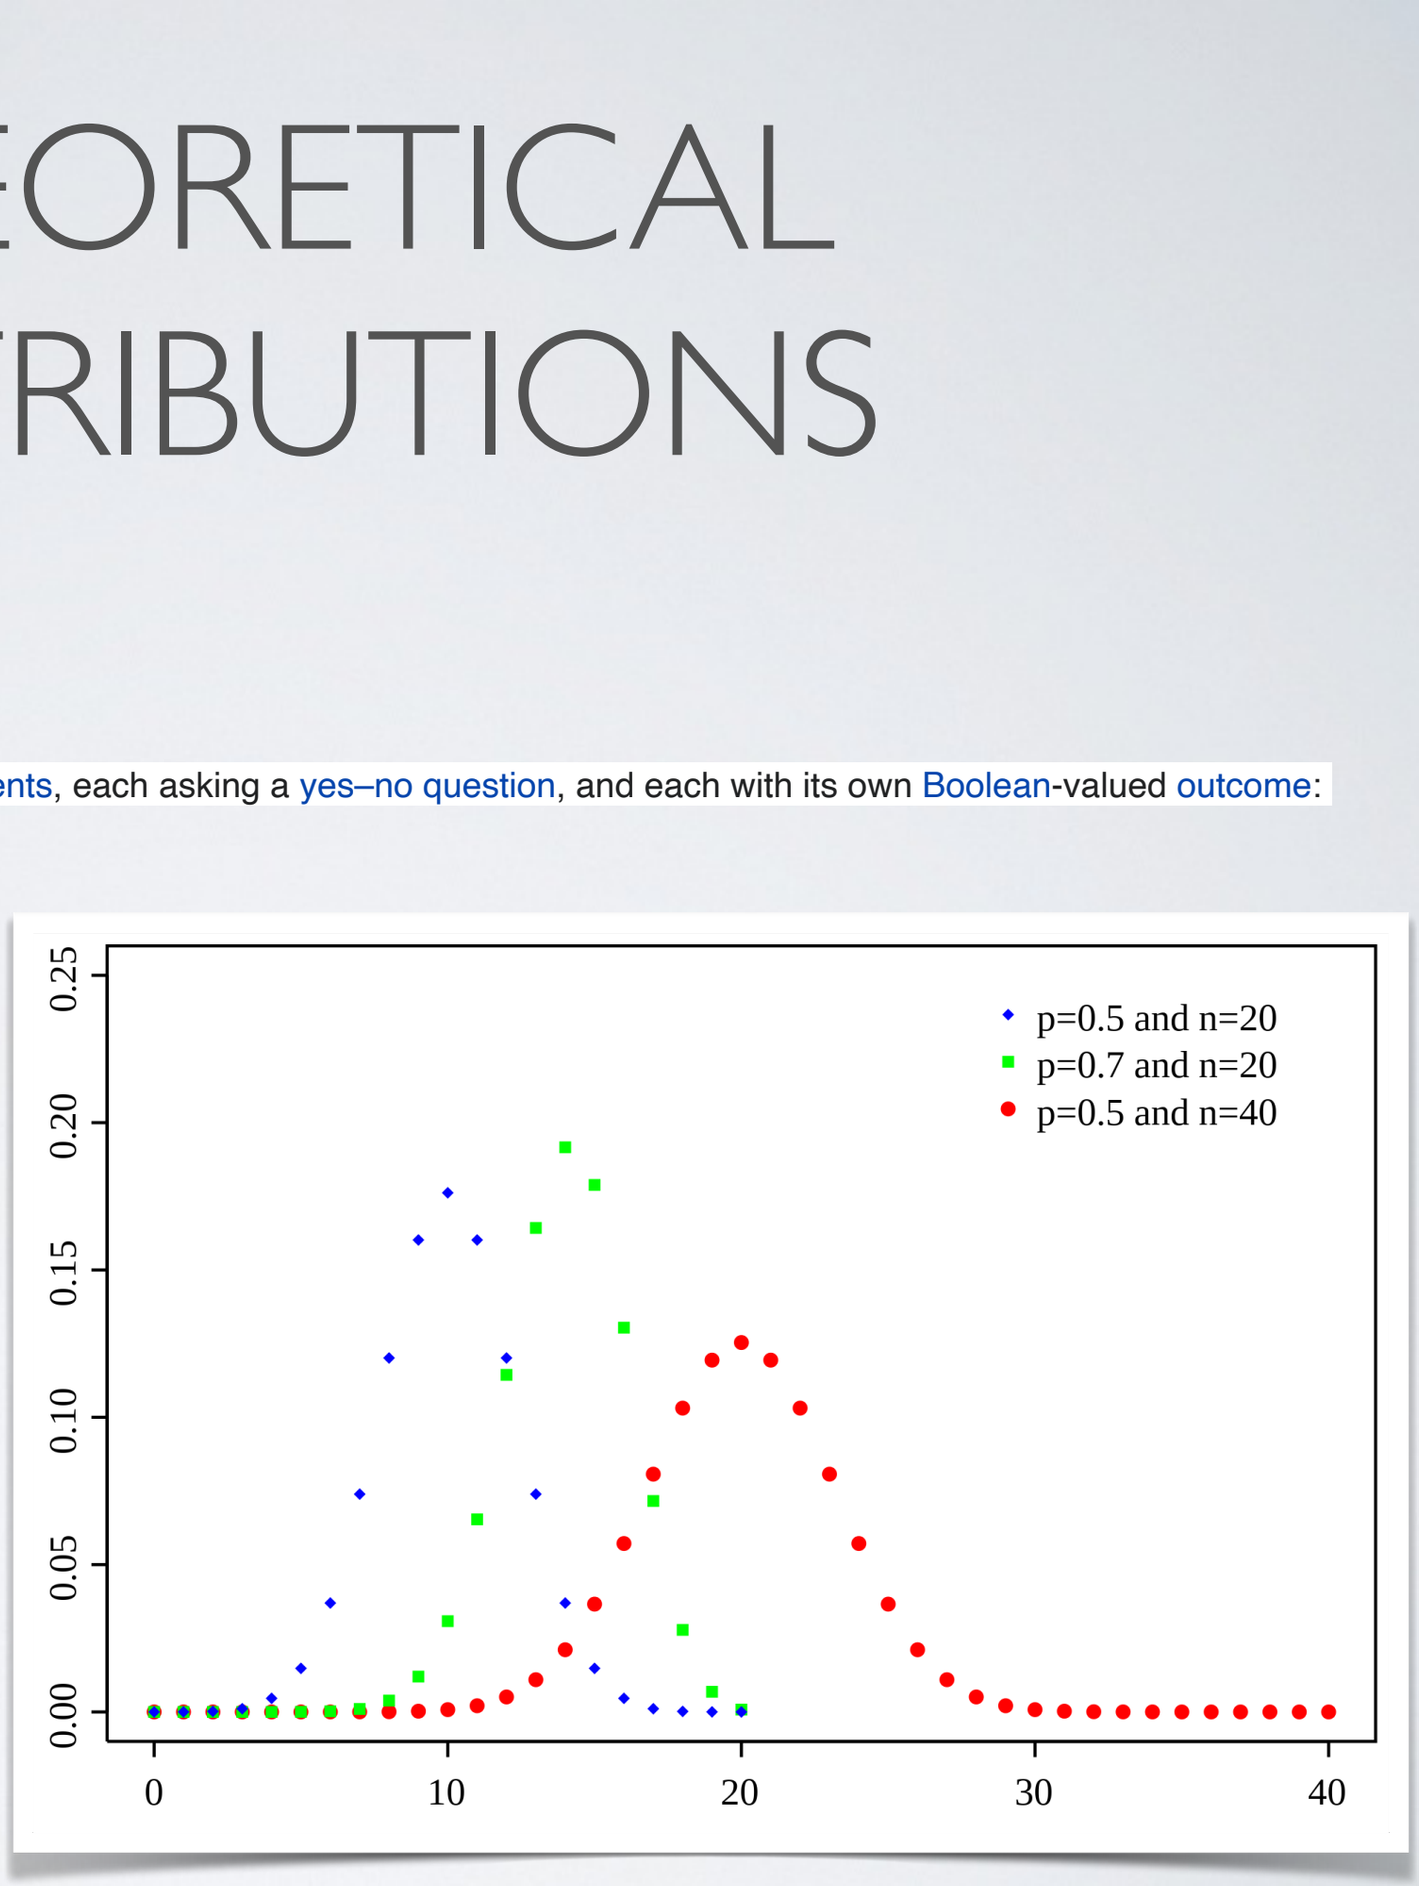
- Normal distribution
  - Many real variables follow it approximately (height, weight, price of a given product in various locations…
  - Random variations around a well-defined mean
  - Central limit theorem: average of many samples of a random variable converges to a normal distribution



THEORETICAL DISTRIBUTIONS

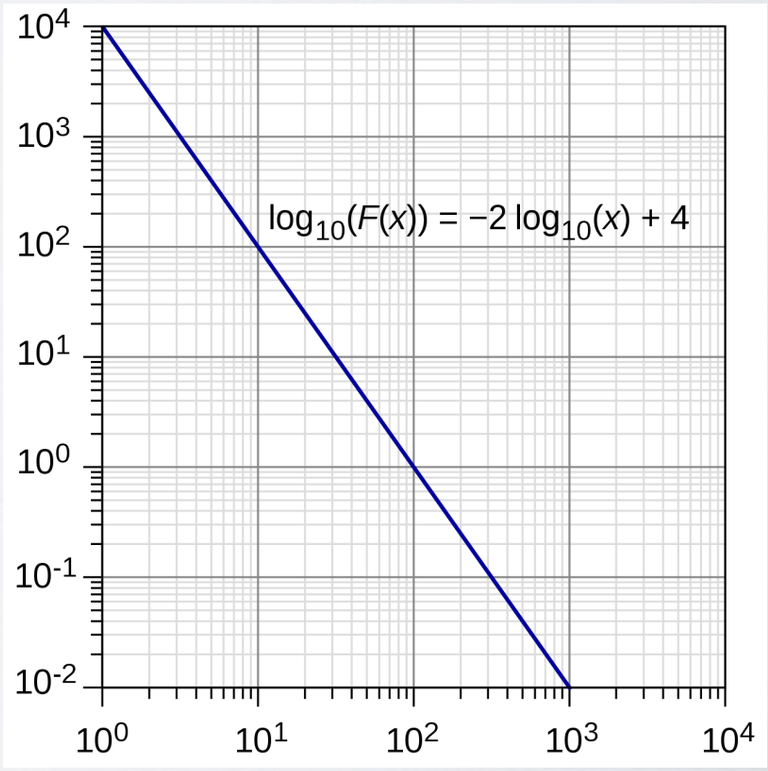
- Binomial distribution

Number of successes in a sequence of *n* independent experiments, each asking a yes–no question, and each with its own Boolean-valued outcome: *success* (with probability *p*) or *failure* (with probability $q = 1 - p$)



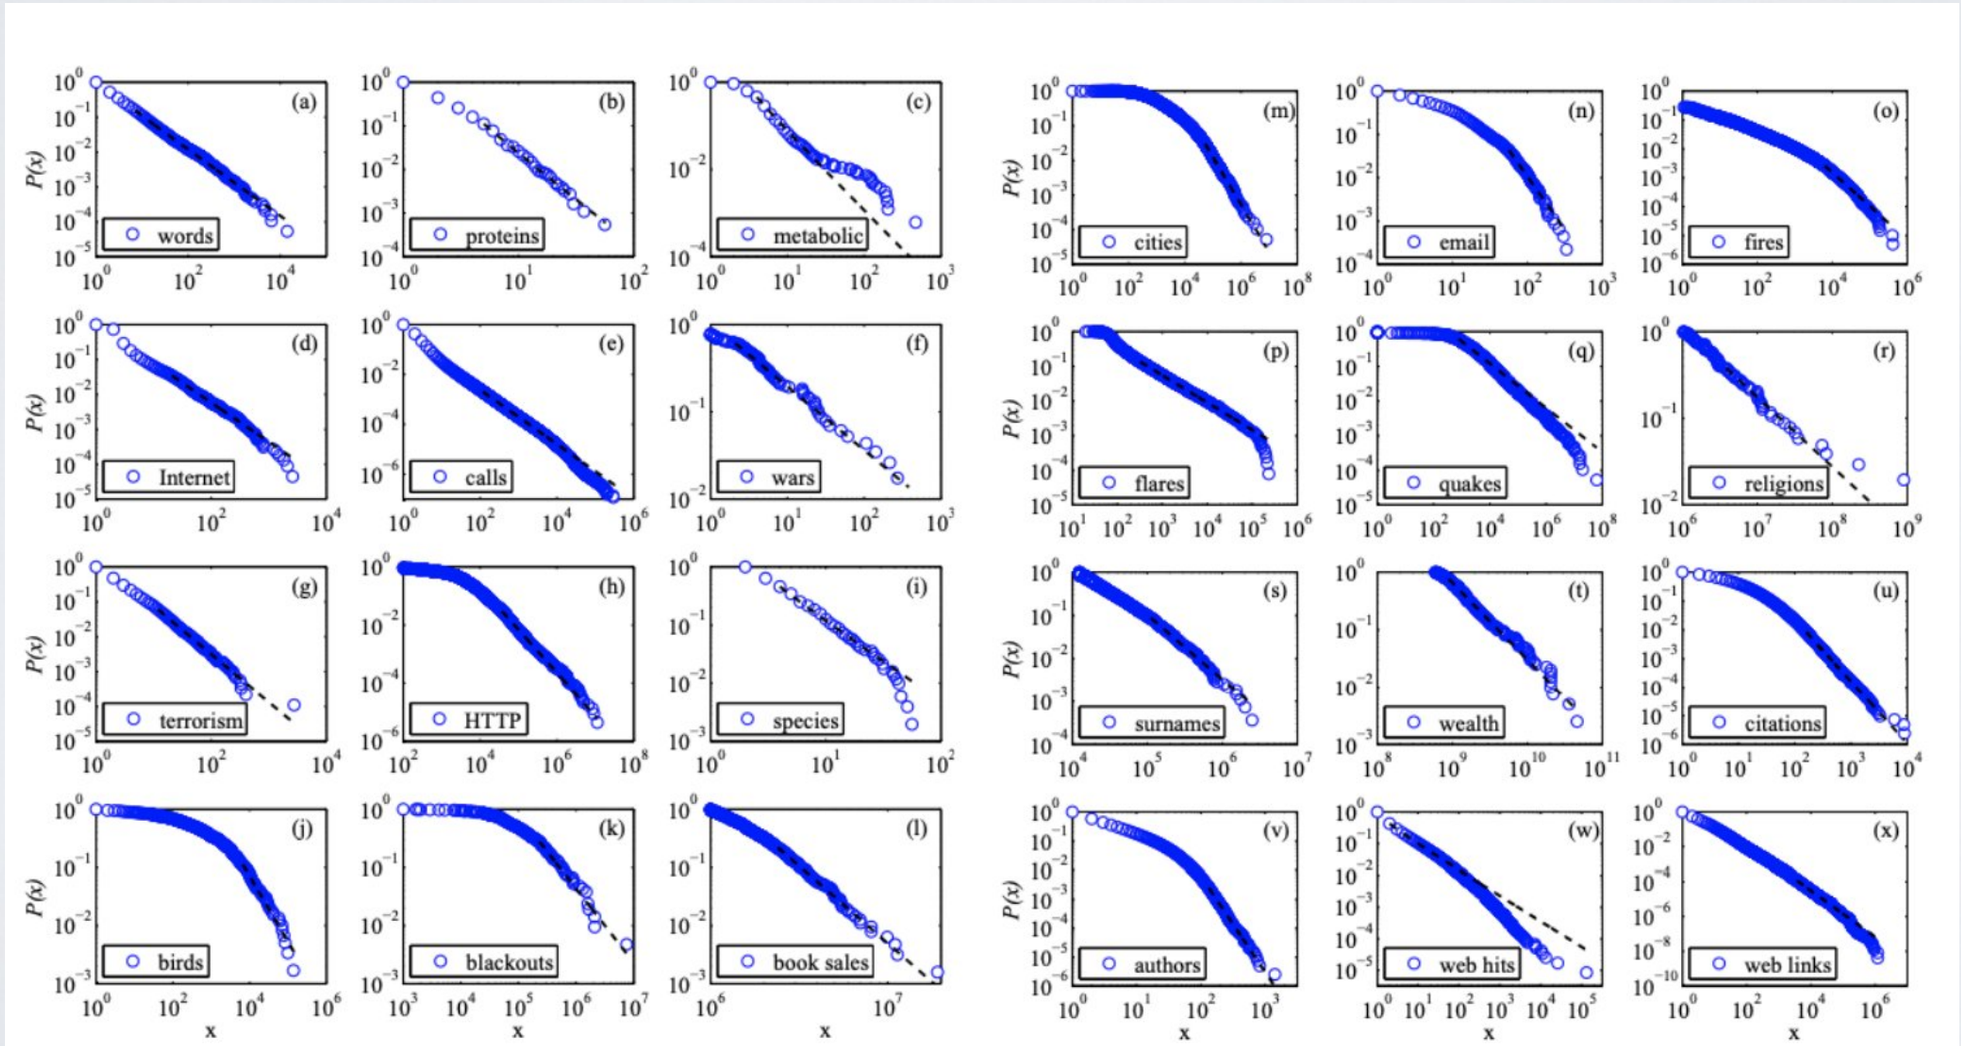
THEORETICAL DISTRIBUTIONS

- Power Law distribution
  - A relative change in one quantity results in a proportional relative change in the other quantity, independent of the initial size of those quantities: one quantity varies as a power of another.
    - e.g., earthquakes 10 times more powerful are x times less frequent.
    - e.g., cities 10 times bigger are x time less frequent



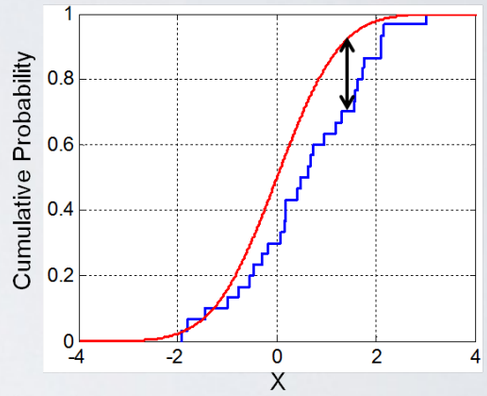
THEORETICAL DISTRIBUTIONS

- Power Law distribution

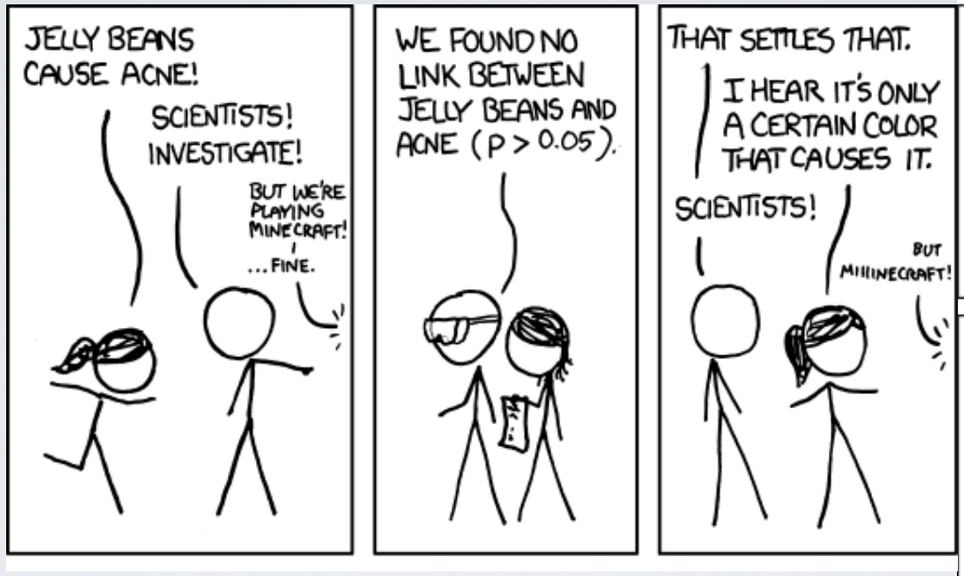


DISTRIBUTION COMPARISON

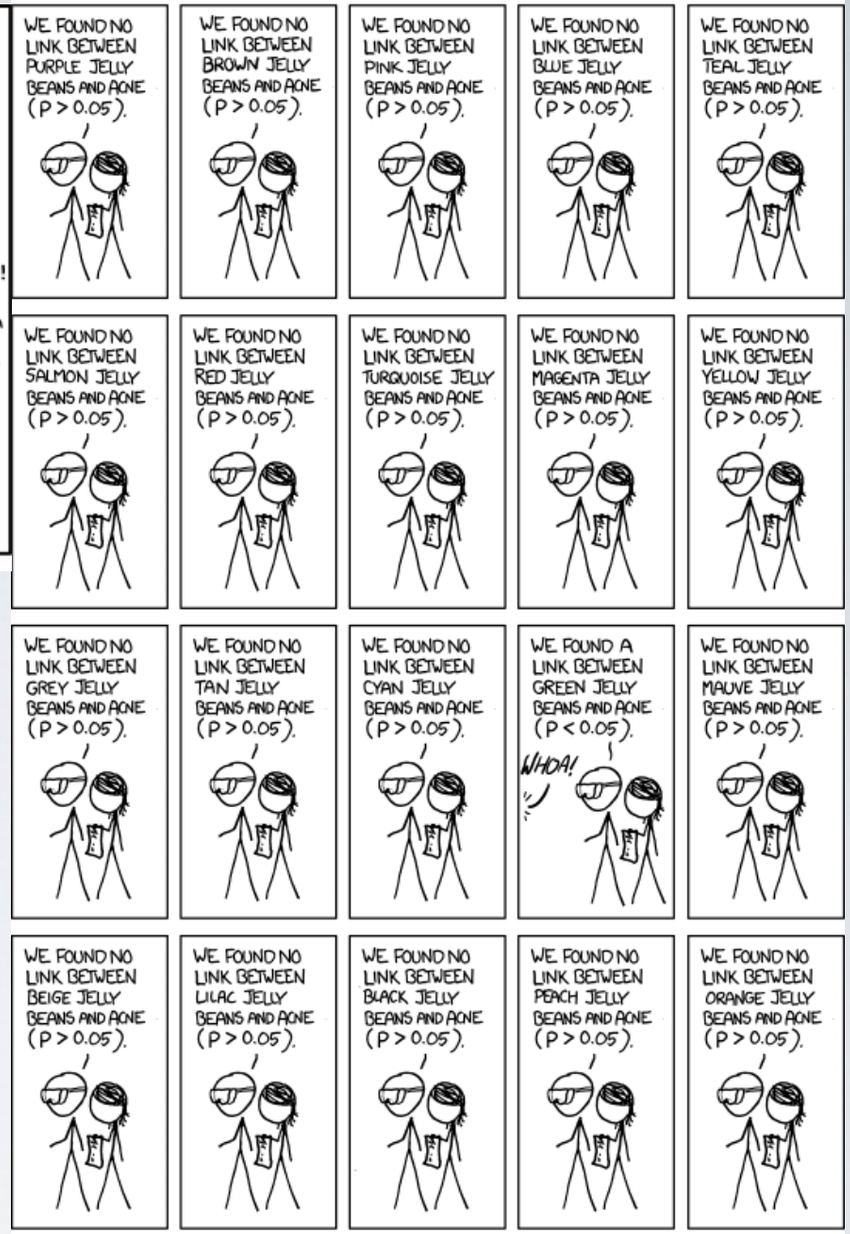
- Statistical test
  - What is the probability that my observed data comes from the theoretical distribution XXX
    - Normality: Shapiro-Wik, etc.
    - Categorical variables : Chi-squared χ^2
    - Etc.
  - What is the probability that two distributions are identical ?
    - Kolmogorov-Smirnov test
    - Bootstrapping
  - "Can we reject the null hypothesis?"
    - p-value large => null hypothesis Likely True. (Probability obtain data if hypothesis True)
    - Normality test: Null hypothesis=>distribution is normal.
    - Hypothesis testing: Null hypothesis=>No relation between variables of interest



P-VALUES



JELLY BEANS CAUSE ACNE!
SCIENTISTS! INVESTIGATE!
BUT WE'RE PLAYING MINECRAFT!
... FINE.
WE FOUND NO LINK BETWEEN JELLY BEANS AND ACNE (P > 0.05).
THAT SETTLES THAT.
I HEAR IT'S ONLY A CERTAIN COLOR THAT CAUSES IT.
SCIENTISTS!
BUT MIIINECRAFT!



WE FOUND NO LINK BETWEEN PURPLE JELLY BEANS AND ACNE (P > 0.05).
WE FOUND NO LINK BETWEEN BROWN JELLY BEANS AND ACNE (P > 0.05).
WE FOUND NO LINK BETWEEN PINK JELLY BEANS AND ACNE (P > 0.05).
WE FOUND NO LINK BETWEEN BLUE JELLY BEANS AND ACNE (P > 0.05).
WE FOUND NO LINK BETWEEN TEAL JELLY BEANS AND ACNE (P > 0.05).
WE FOUND NO LINK BETWEEN SALMON JELLY BEANS AND ACNE (P > 0.05).
WE FOUND NO LINK BETWEEN RED JELLY BEANS AND ACNE (P > 0.05).
WE FOUND NO LINK BETWEEN TURQUOISE JELLY BEANS AND ACNE (P > 0.05).
WE FOUND NO LINK BETWEEN MAGENTA JELLY BEANS AND ACNE (P > 0.05).
WE FOUND NO LINK BETWEEN YELLOW JELLY BEANS AND ACNE (P > 0.05).
WE FOUND NO LINK BETWEEN GREY JELLY BEANS AND ACNE (P > 0.05).
WE FOUND NO LINK BETWEEN TAN JELLY BEANS AND ACNE (P > 0.05).
WE FOUND NO LINK BETWEEN CYAN JELLY BEANS AND ACNE (P > 0.05).
WE FOUND A LINK BETWEEN GREEN JELLY BEANS AND ACNE (P < 0.05).
WHOA!
WE FOUND NO LINK BETWEEN MAUVE JELLY BEANS AND ACNE (P > 0.05).
WE FOUND NO LINK BETWEEN BEIGE JELLY BEANS AND ACNE (P > 0.05).
WE FOUND NO LINK BETWEEN LILAC JELLY BEANS AND ACNE (P > 0.05).
WE FOUND NO LINK BETWEEN BLACK JELLY BEANS AND ACNE (P > 0.05).
WE FOUND NO LINK BETWEEN PEACH JELLY BEANS AND ACNE (P > 0.05).
WE FOUND NO LINK BETWEEN ORANGE JELLY BEANS AND ACNE (P > 0.05).

HEY, LOOK AT THIS INTERESTING SUBGROUP ANALYSIS

VARIANCE

- Variance:
  - Expectation of the squared deviation of a random variable from its mean

$$\operatorname{Var}(X) = \sigma^2 = \mathrm{E}\left[(X - \mu)^2\right]$$

Also expressed as average squared distance between all elements

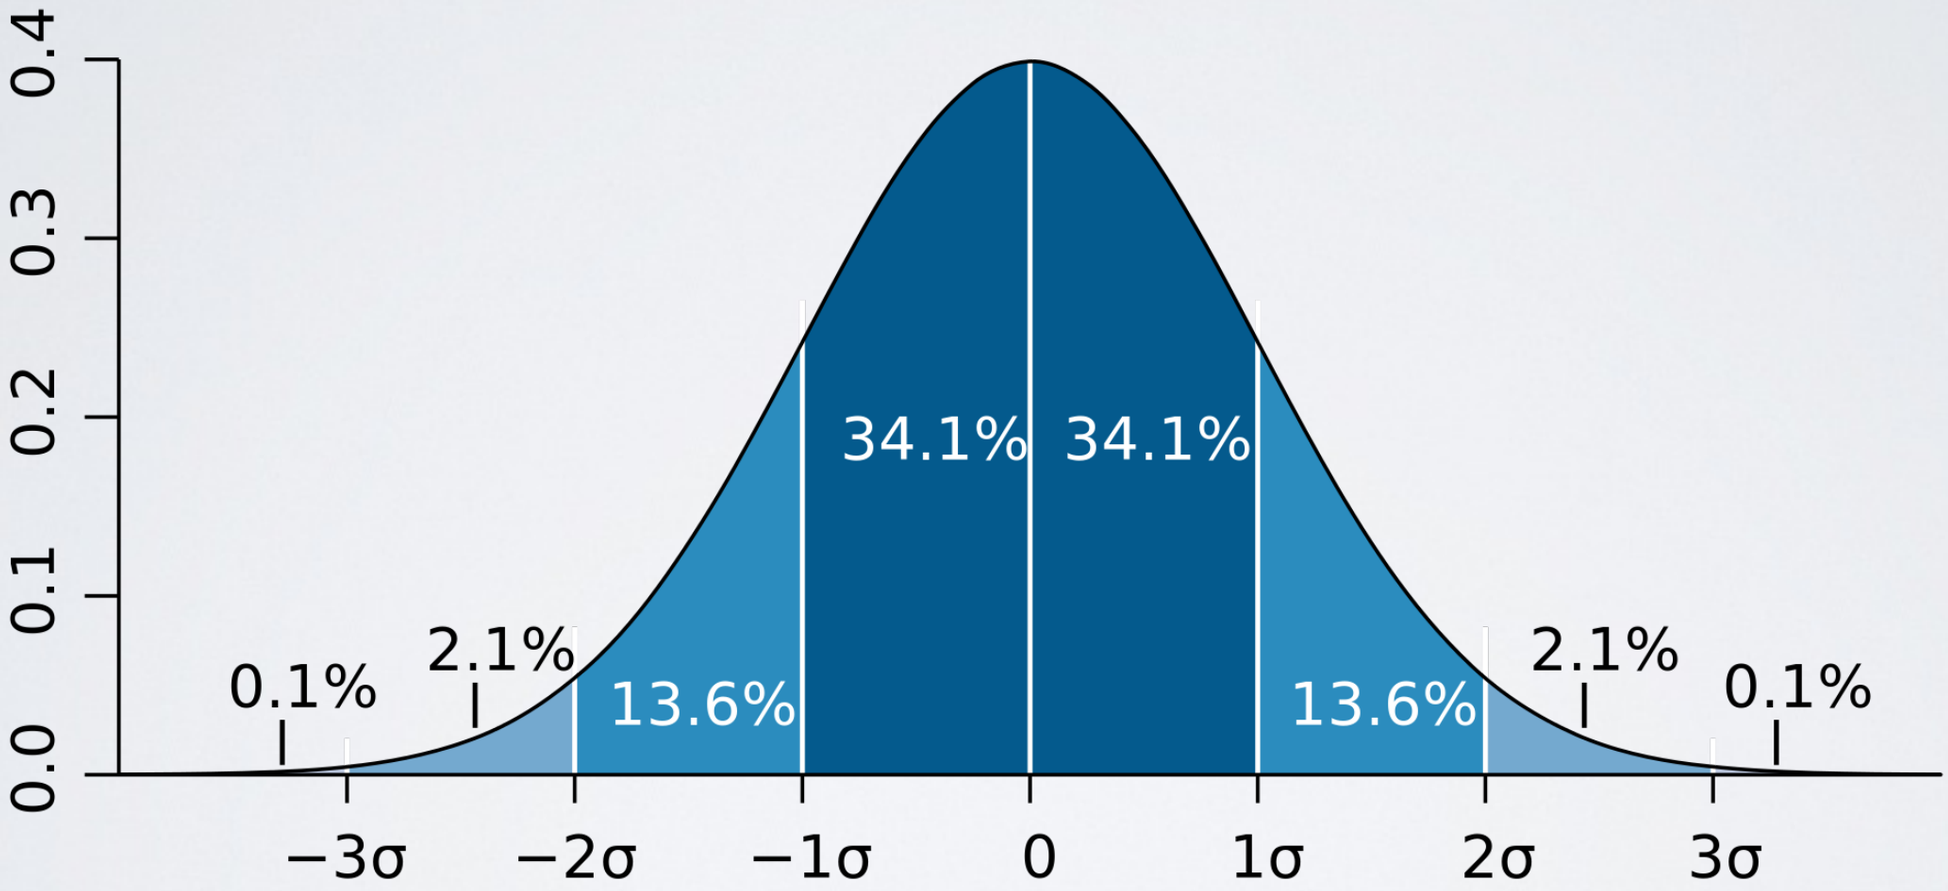
$$\sigma^2 = \frac{1}{N^2} \sum_{i<j} \left(x_i - x_j\right)^2$$

STANDARD DEVIATION

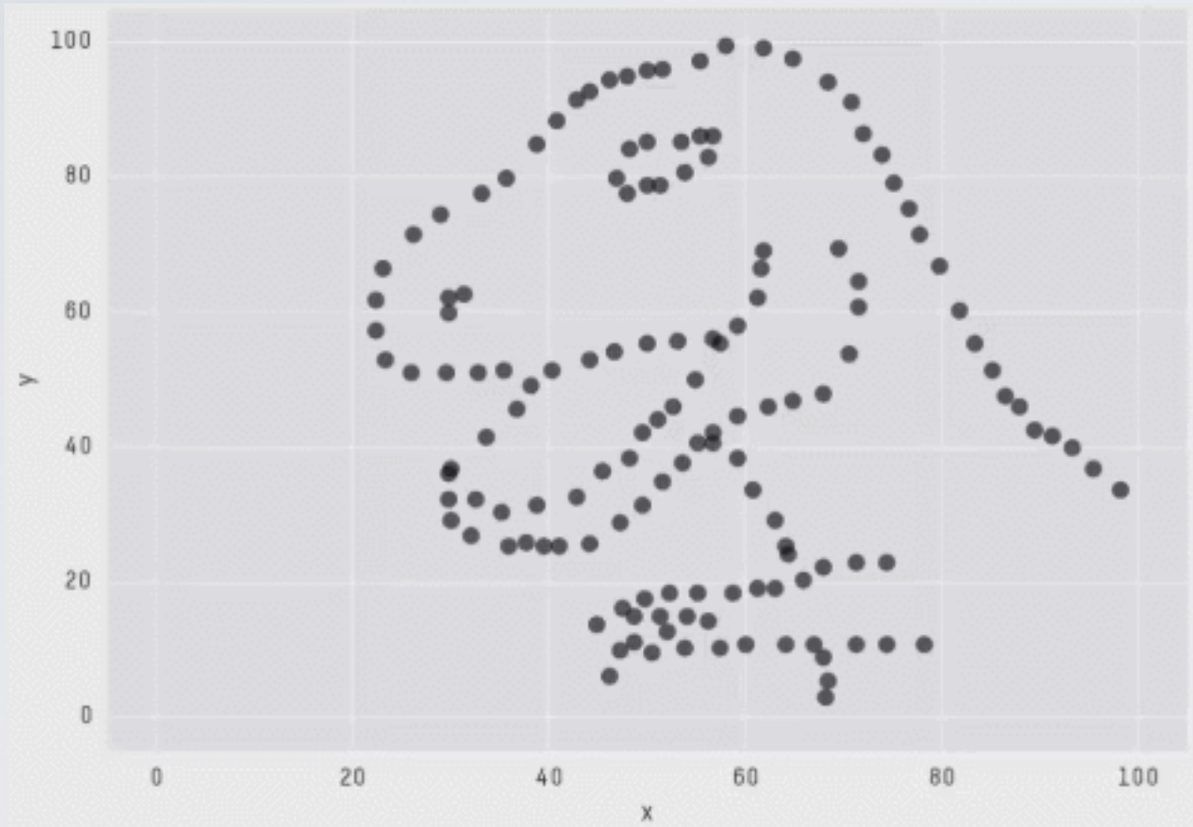
- Squared root of the Variance

$$\sigma = \sqrt{\sigma^2} = \sqrt{\mathrm{E}\left[(X - \mu)^2\right]}$$

RELATION WITH NORMAL DISTRIBUTION



DESCRIPTIVE STATISTICS



X Mean: 54.2659224
Y Mean: 47.8313999
X SD : 16.7649829
Y SD : 26.9342120
Corr. : -0.0642526

The datasaurus

https://github.com/jumpingrivers/datasauRus

ABSOLUTE DEVIATION

- MAD (Mean Absolute Deviation)
  - Deviation from mean or from median
  - (Variant: Median Absolute Deviation)
- $\frac{1}{n}\sum_{i=1}^{n} |x_i - m(X)|$
- So why are we using the Standard Deviation again ?
  - The mean minimizes the expected squared distance
  - The median minimizes the MAD
  - Nice relation with euclidean geometry (sum of variance is variance of the sum)
  - Leads naturally to least square regression and PCA… see later.
  - Nevertheless, not the unique true objective. Think of what you really want to measure… Sensibility to outliers…

VARIABLE INTERACTIONS

COVARIANCE MATRIX

Covariance Matrix Formula

cuemath
THE MATH EXPERT

$$\begin{bmatrix} \mathrm{Var}(x_1) & \cdots & \mathrm{Cov}(x_n, x_1) \\ \vdots & \ddots & \vdots \\ \mathrm{Cov}(x_n, x_1) & \cdots & \mathrm{Var}(x_n) \end{bmatrix}$$

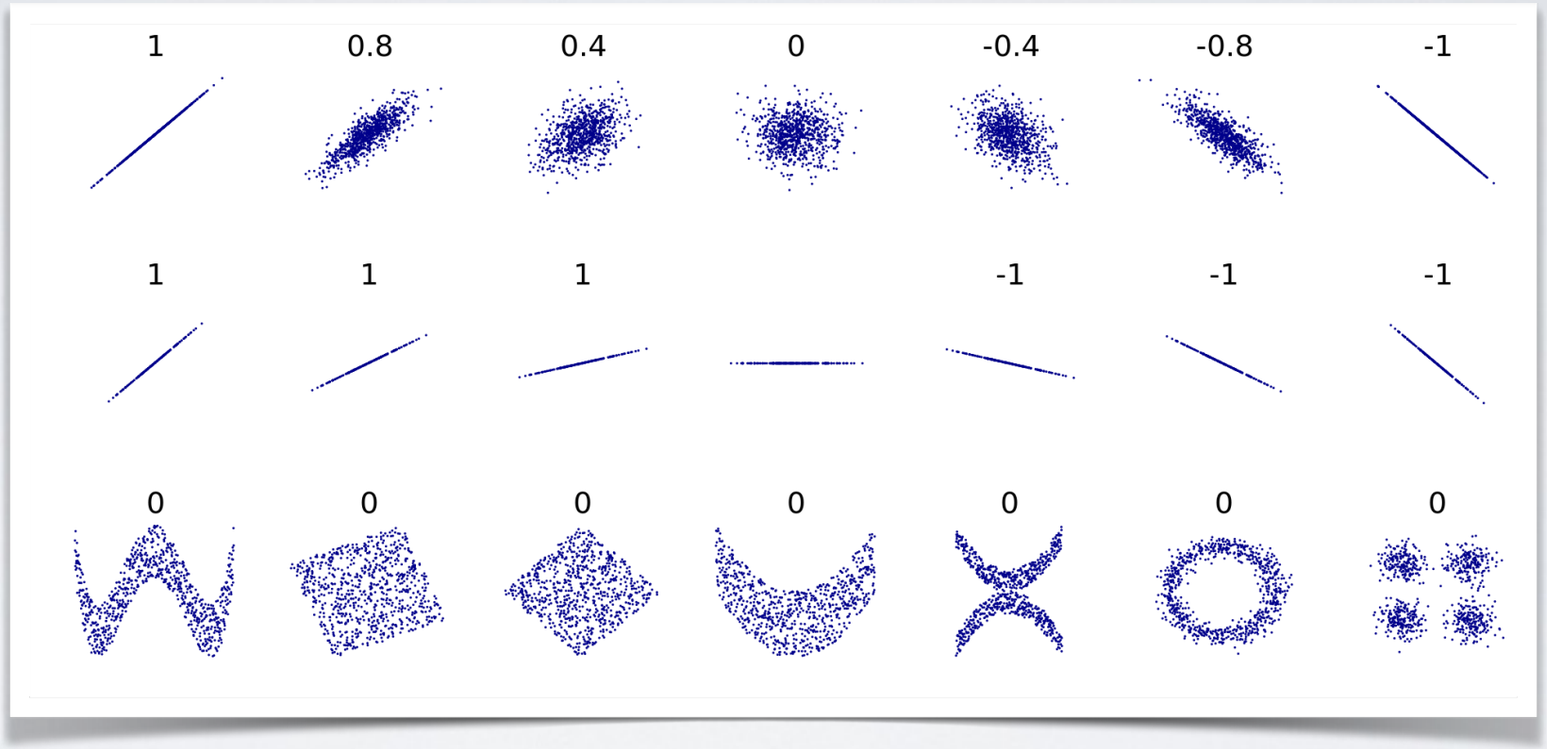
- Covariance matrix $\mathbf{K}$
  - Extension of Variance to multivariate data
  - $\operatorname{Var}(X) = \operatorname{E}\left[(X - \mu)^2\right]$
  - $\operatorname{cov}(\mathbf{X}, \mathbf{Y}) = \mathbf{K_{XY}} = \operatorname{E}\left[(\mathbf{X} - \operatorname{E}[\mathbf{X}])(\mathbf{Y} - \operatorname{E}[\mathbf{Y}])^{\mathrm{T}}\right]$
    - How much observation X differs from the mean ? And Y ?
    - Multiply the respective divergences of X and of Y for each item
    - Take the average
  - $\Rightarrow \operatorname{cov}(\mathbf{X}, \mathbf{X}) = \operatorname{Var}(\mathbf{X})$

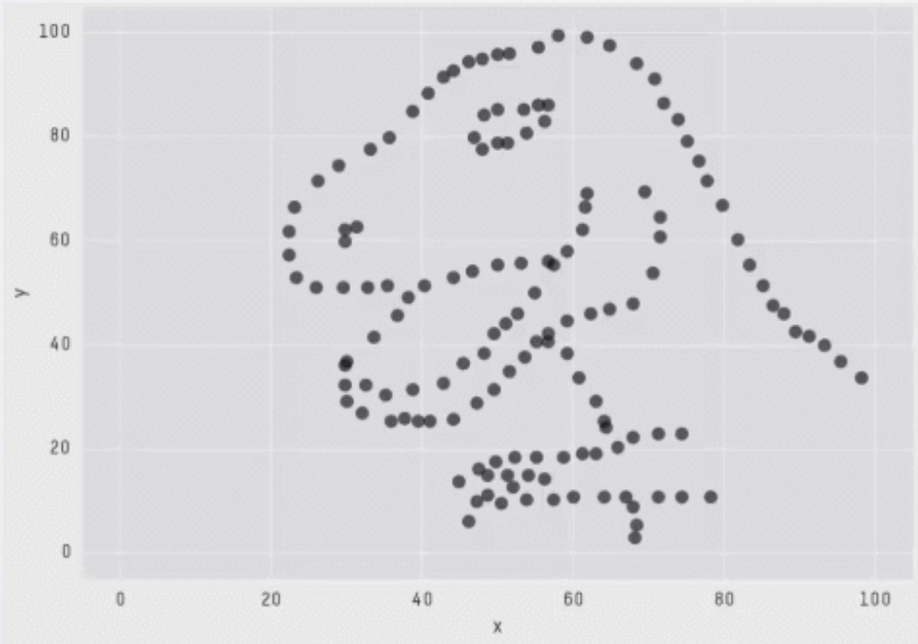
- Covariance is hardly interpretable by itself.
  - If >0, divergences tend to be in the same direction
  - Normalize it to obtain the "correlation coefficient"

CORRELATION COEFFICIENT

- Pearson correlation coefficient : $\rho_{X,Y} = \frac{\mathrm{cov}(X, Y)}{\sigma_X \sigma_Y}$
  - Normalize the Covariance by the Standard deviation.
  - Independent from magnitude, i.e., no need to have normalized data
  - Value in -1, +1.
    - +1 means a perfect positive linear correlation, i.e., X=aY
    - -1 a negative one, i.e., X=-bY
  - 0 can mean many different things

CORRELATION COEFFICIENT





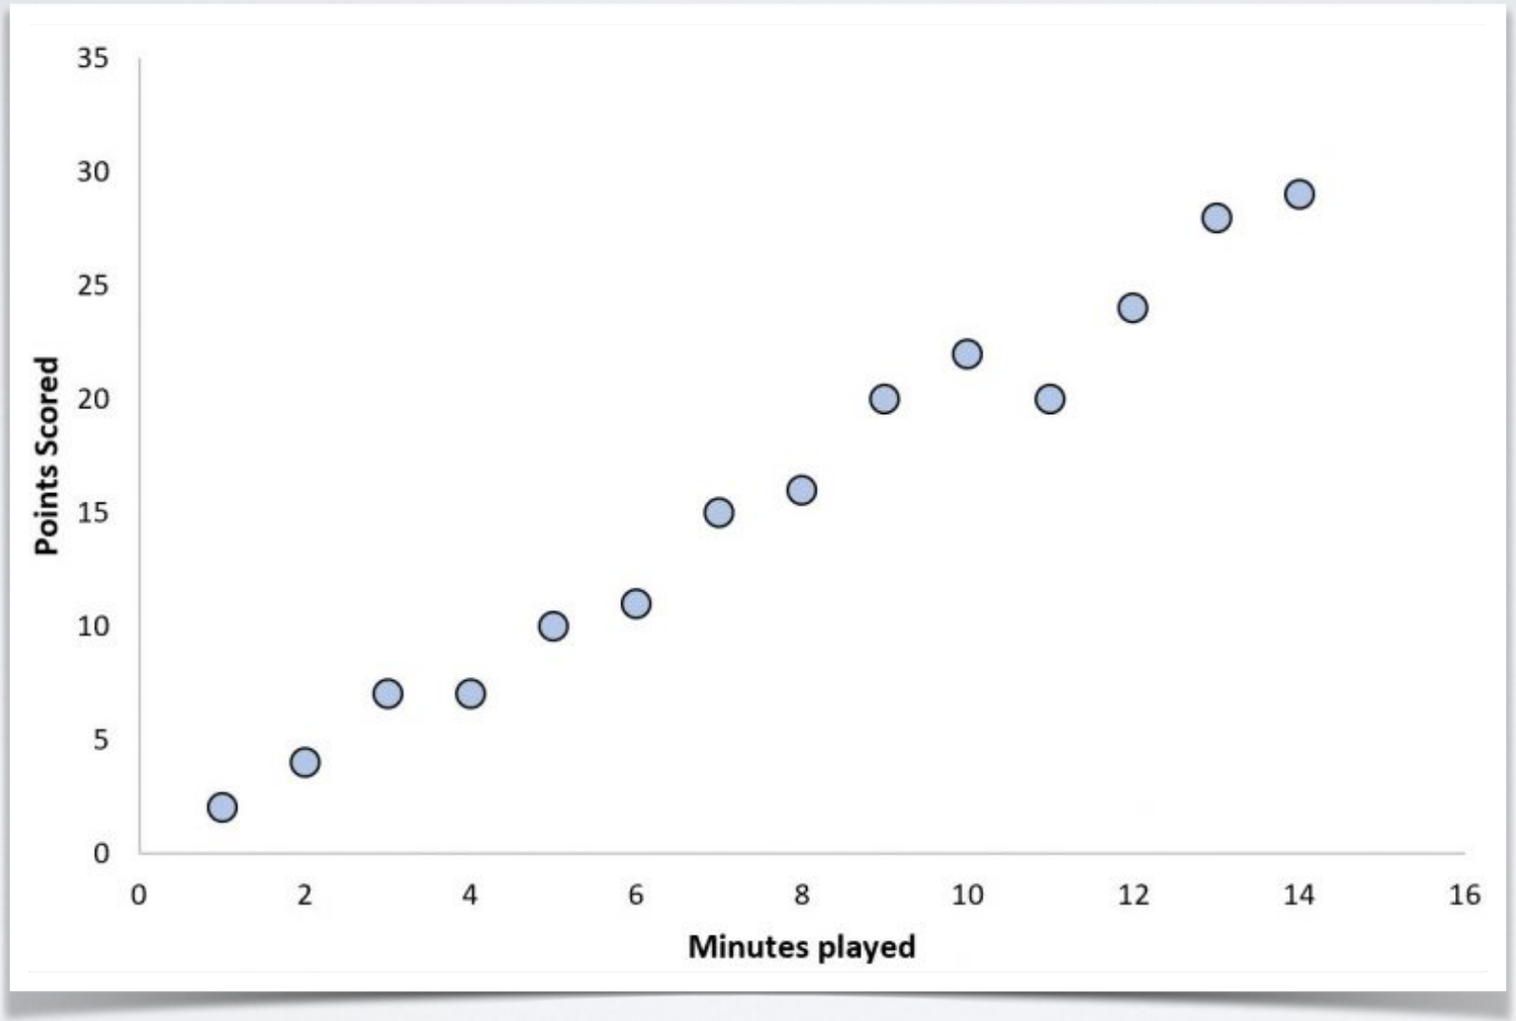
X Mean: 54.2659224
Y Mean: 47.8313999
X SD : 16.7649829
Y SD : 26.9342120
Corr. : -0.0642526

CORRELATION COEFFICIENT

- Other possible interpretation, e.g.
  - Cosine similarity of the vectors defined by the observations…

- 0.7 ? Is it a high or low value ?
  - It depends.

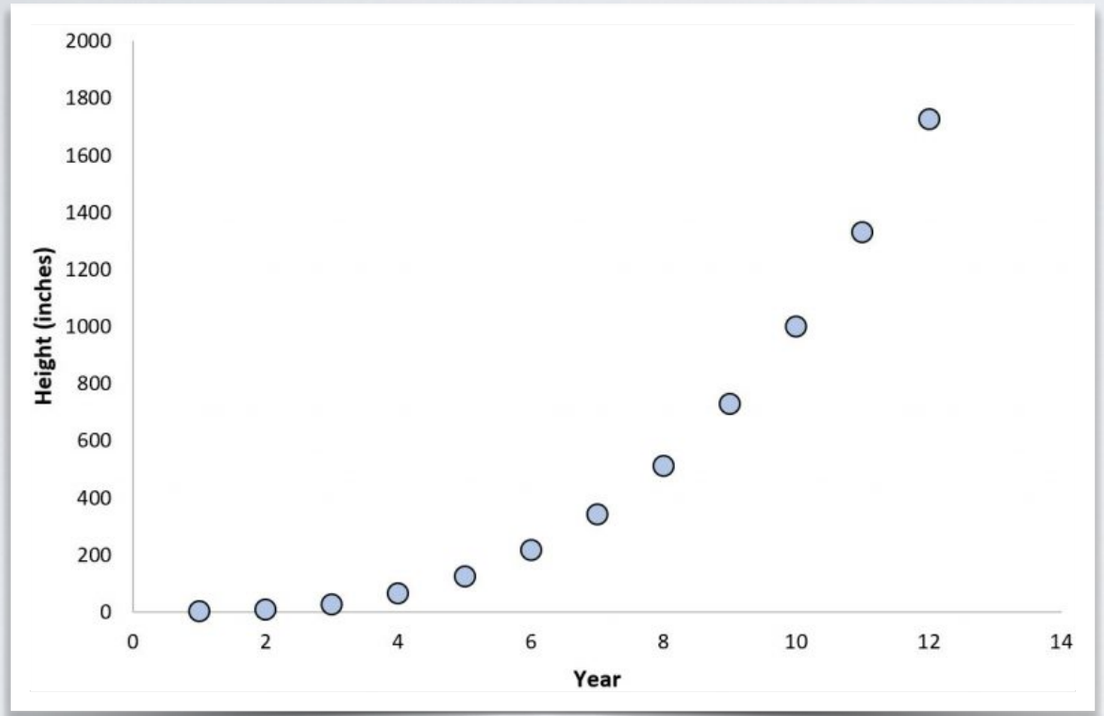
NONLINEAR RELATIONSHIPS

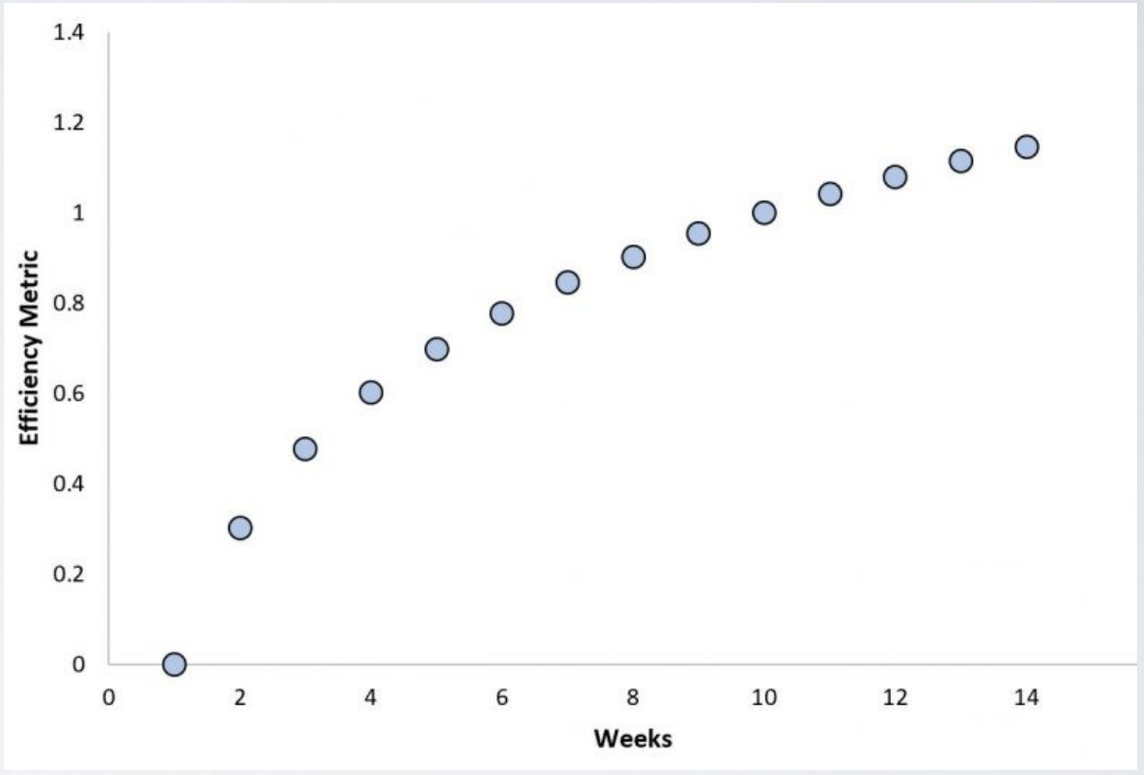


Linear relationship

$Y=a+bX+e$

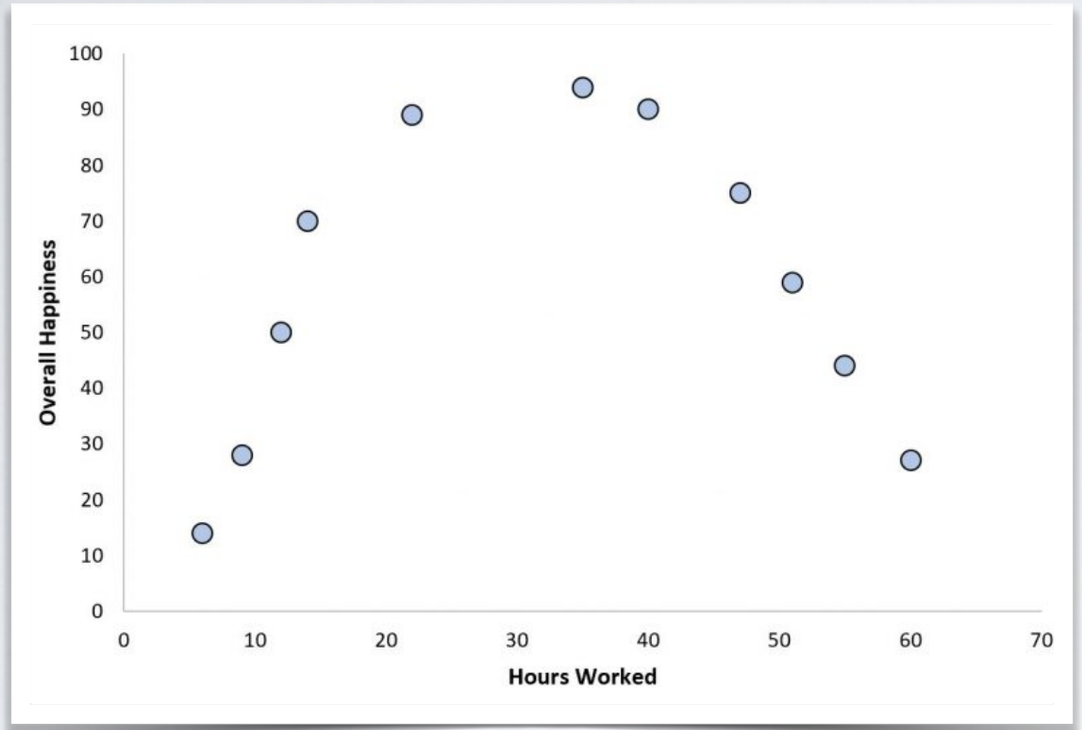
NONLINEAR RELATIONSHIPS

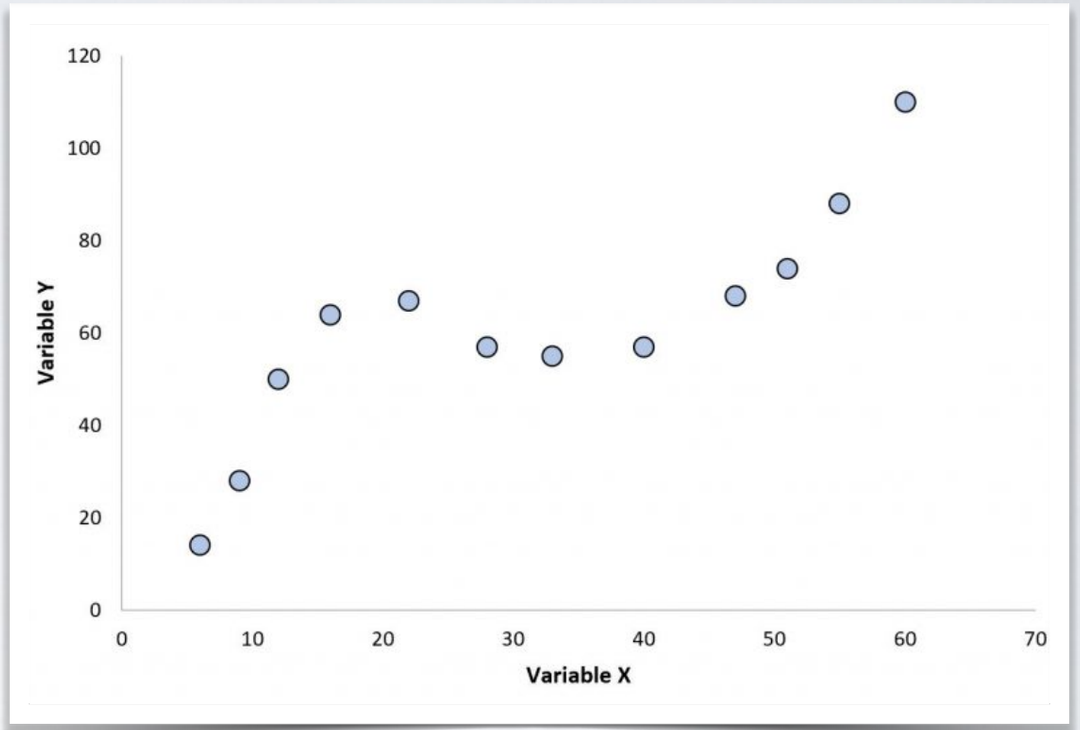




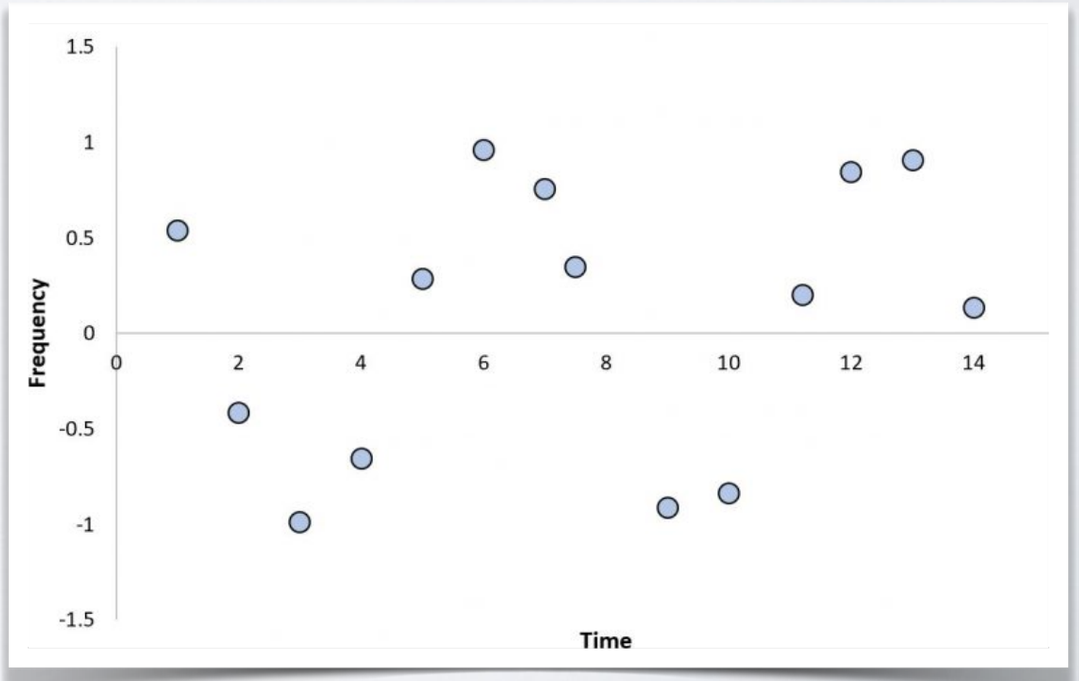
Monotonous, non-linear

NONLINEAR RELATIONSHIPS





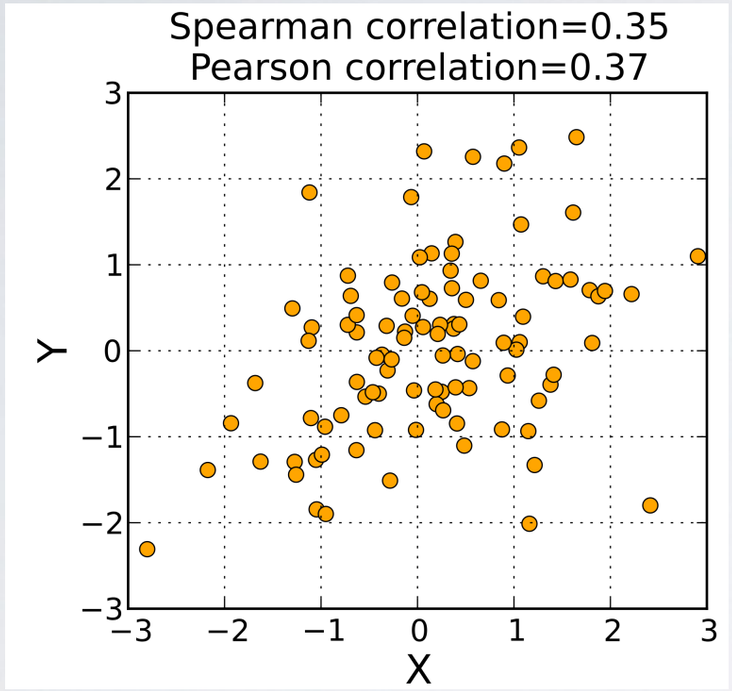
Non-monotonous,
Non-linear

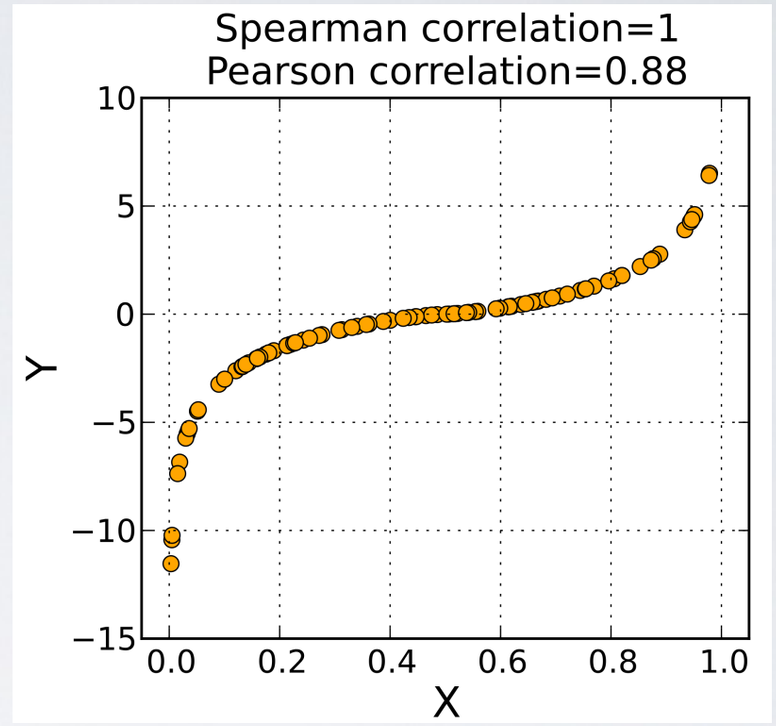


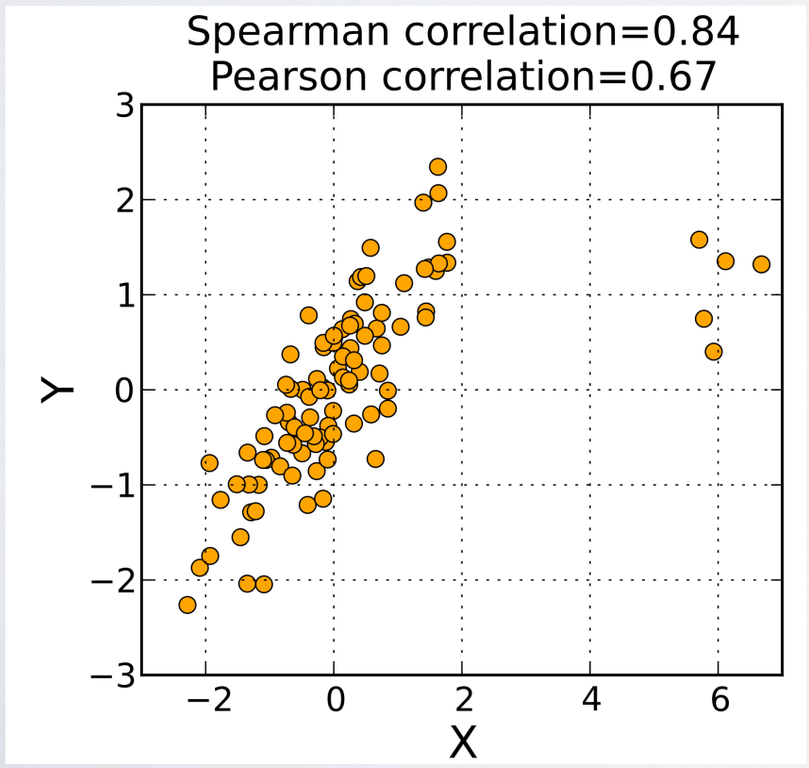
SPEARMAN'S CORRELATION

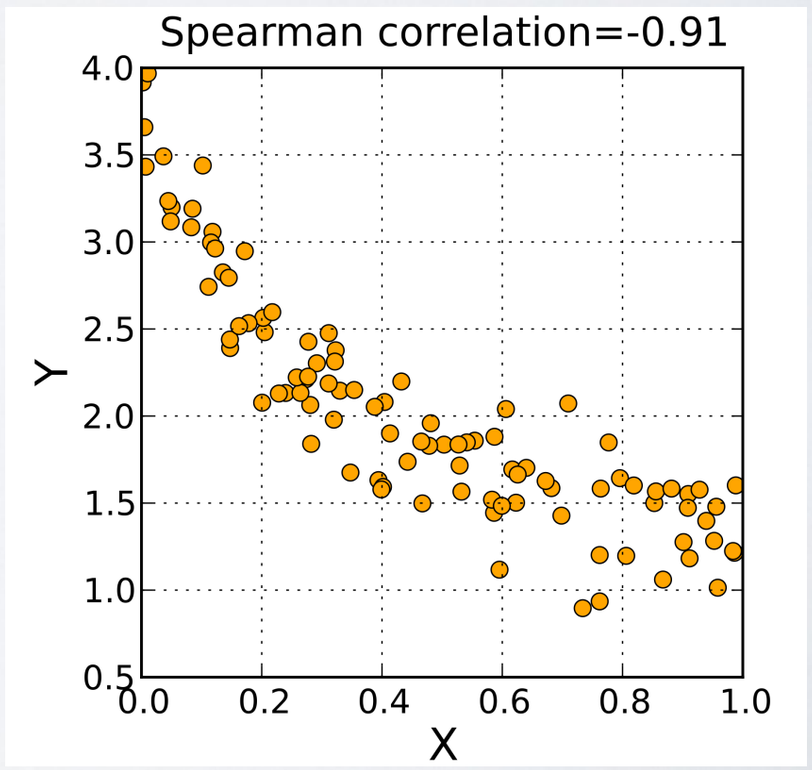
- Spearman's **rank** correlation coefficient
- Assesses how well the relationship between two variables can be described using a monotonic function
  - Not assuming a linear relation
- Pearson correlation coefficient between the rank variables
  - $r_s = \rho_{\mathrm{R}(X),\mathrm{R}(Y)} = \dfrac{\mathrm{cov}(\mathrm{R}(X), \mathrm{R}(Y))}{\sigma_{\mathrm{R}(X)} \sigma_{\mathrm{R}(Y)}}$

SPEARMAN'S CORRELATION



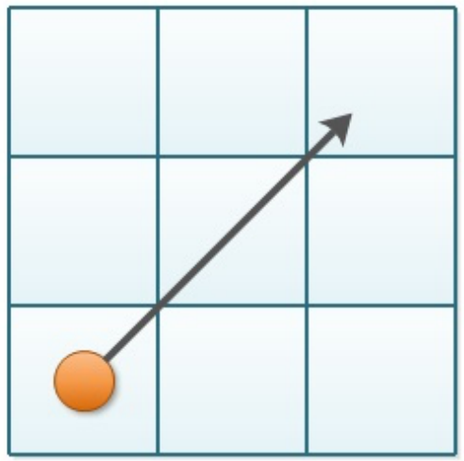






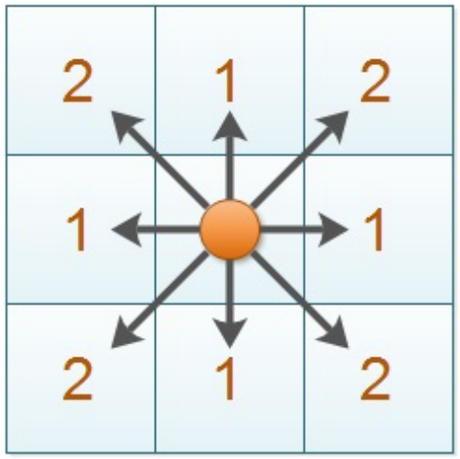
NOTIONS OF DISTANCE

Euclidean Distance



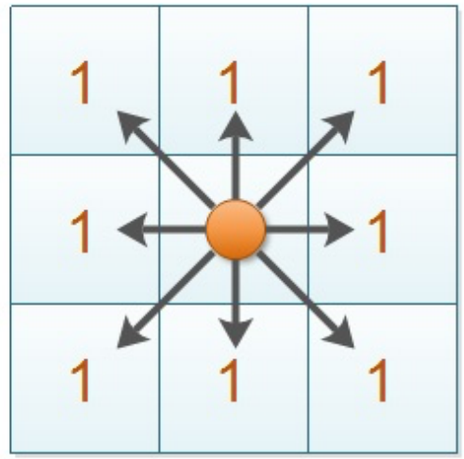
$$\sqrt{(x_1 - x_2)^2 + (y_1 - y_2)^2}$$

Manhattan Distance



$$|x_1 - x_2| + |y_1 - y_2|$$

Chebyshev Distance



$$\max(|x_1 - x_2|, |y_1 - y_2|)$$

FEATURE SCALING

- We want to use euclidean distance to compute the "distance" between 2 people based on attributes age(y), height(m), weight(g).
  - a= (y:20,m:1.82,g:80 000), b=(y:20,m:1.82,g:81000), c=(y:90,m:1.50,g:80 020)
    - d(a,b)=1000.0005
    - d(a,c)=72.8
  - That is not what we expected from our expert knowledge!
    - We should normalize/standardize data

FEATURE SCALING

- Rescaling (Normalization): $x' = \frac{x - \min(x)}{\max(x) - \min(x)}$:[0,1]

- Mean normalization: $x' = \frac{x - \text{average}(x)}{\max(x) - \min(x)}$: 0=mean

- Standardization (z-score normalization): $x' = \frac{x - \bar{x}}{\sigma}$
  - 0: mean, -1/+1: 1 standard deviation from the mean

SOME "GOLDEN RULES"

SOME "GOLDEN RULES"

- In real life:
  - Your data does not follow a normal distribution. Nor a power law, nor any other theoretical distribution
  - Your features are always correlated
  - You always have non-linear relationships

SOME "GOLDEN RULES"

- GIGO: Garbage in, Garbage out

SOME "GOLDEN RULES"

- Real data is always garbage

SOME "GOLDEN RULES"

- Get to know your data
  - Exploratory Analysis

EXPERIMENTS

- Go to the webpage of the class and do today's experiments
- The "Advanced" section is not mandatory, you can do it if you have time
